

Eyelash Extensions After Care

These instructions are to ensure you have absolutely no issues after your Lash extension appointment. Please adhere to these before/after care directions to ensure flawless eyelashes.

AFTER CARE INSTRUCTIONS:

- After you shower, don't wet your eyelashes for 24 hours after your procedure. This will give the glue an appropriate amount of time to cure. This means you should also avoid steam rooms/saunas and swimming during that period.
- Do not use waterproof mascara on your eyelashes. A water-soluble mascara or one designed specifically for eyelash extensions is fine to use, although you will probably find that you no longer require mascara.
- Use cotton swabs to remove makeup by working gently around the eyelashes. Do not use cleansers, makeup removers, or moisturizers that contain oil or solvents on your eyes. These will compromise the bonding agent used to adhere your eyelashes.
- Do not rub your eyes, instead you should get used to patting your eyes gently, which is in fact much better for the eyelashes and the sensitive skin around the eyes.
- Be careful not to get your eyelashes caught on clothes when you're dressing and undressing, or towels when you have showered.
- Never pull your eyelash extension off as it will pull out your natural eyelash. If you want them removed, contact us for our professional eyelash removal service.
- Do not perm or tint your eyelash extensions.
- Do not use eyelash curlers on your eyelashes.
- Book your next eyelash refill 2-3 weeks out in order to maintain your optimum eyelash effect.
- After you shower you can gently dry and shape your eyelashes using your hairdryer on the lowest setting. Hold the dryer at least 20 centimeters below your face and gently coax the eyelashes with your index finger in an upward motion until they are dry. When you shower, keep a towel in easy reach so that you can gently pat your eyes between washing and conditioning your hair. This saves you rubbing your eyes to clear your vision, so that you can locate the conditioner.
